

Dear Sir or Madame,

I urge you to eject the NAB's petition #04-160. Satelite Radio, which consists of paid subscribers, should not be stifled in their efforts to provide value to their customers. If there is cost effective technology available to this industry that will improve the value in and experience of using its product, it is unthinkable that such socialist threat to this business is even allowed to rear its ugly head.

Please allow this industry to continue to offer a competitive and viable product to its customers, and give it the freedom to make improvements and take advantage of modern technology, as any good business should!
